1. Executive Summary

Straep is a brand-first social business platform where businesses, creators, professionals, customers, and developers interact in one ecosystem.

The core product allows any brand — a small business, creator, consultant, school, church, agency, or professional — to build a fully customisable digital brand page that combines a social media profile, mini-website, digital storefront, portfolio, lead-generation page, and content hub in one place.

Unlike LinkedIn, Instagram, or Facebook, Straep gives each brand real identity control. A brand's Straep page should feel like a page they own, not a profile that looks identical to everyone else on the platform.

For regular users (customers), Straep provides a place to discover trusted brands, view useful content, save products, apply for opportunities, join communities, and interact with businesses — making the platform engaging for non-business users, not just brands.

For developers and designers, Straep's template marketplace (Phase 4) provides a commercial channel to create and sell brand page templates, generating a third revenue stream for the platform.

Primary tagline: "Your brand. Your page. Your market. Your growth."

Elevated tagline: "Where brands become experiences."

2. Problem Statement

2.1 Problem for Businesses and Brands

Most businesses today rely on social media platforms that were not designed around brand identity. On Facebook, Instagram, LinkedIn, TikTok, and X, a brand's page looks nearly identical to every other brand's page. Identity is limited to a profile photo, a banner image, a bio, and posts.

Key problems brands face:

- **No identity control.** Every business page looks the same.
- **Scattered tools.** Brands maintain a website for products, Instagram for posts, WhatsApp for inquiries, and email for leads — all separate and unconnected.
- **No lead management.** Inquiries that arrive via DMs or comments are easy to lose.
- **No storefront for service brands.** Platforms like Shopify focus on products; LinkedIn ignores services entirely.
- **No analytics beyond basic engagement.** Brands cannot see what drives actual leads or customer actions.
- **Limited trust signals.** Reviews, verification, response rate, and testimonials are either hidden or non-existent.

2.2 Problem for Customers and General Users

- Discovering reliable local or online businesses is difficult.
- Reviews and trust signals are scattered across Google, Facebook, and WhatsApp groups.
- There is no single platform where users can follow a business, view its products, read reviews, and send an inquiry — all in one place.
- Users consume entertainment content on Instagram/TikTok but rarely discover business content there.

2.3 Problem for Developers and Designers

- There is no marketplace specifically for selling customisable brand page templates.
 - Developers who build themes for websites earn once (direct sale). There is no recurring, commission-based ecosystem they can participate in as a branded template marketplace.
-

3. Product Vision

3.1 Vision Statement

Straep is a brand-first social media and commerce platform built to help businesses, creators, and professionals express their identity, earn trust, engage their audience, and sell

more. Unlike traditional platforms where every business page looks the same, Straep gives brands customisable digital spaces that function as social profiles, storefronts, portfolios, and business hubs. Through its template marketplace, developers and designers create and sell branded page experiences, while users discover trusted brands, useful content, opportunities, communities, and products in one engaging platform.

3.2 Strategic Positioning

Platform	What it does well	What it lacks
LinkedIn	Professional networking	Brand customisation, storefront, discovery
Instagram	Visual content	Business pages, lead management, CTAs
Facebook	Community, groups	Modern brand pages, professional identity
Shopify	E-commerce	Social engagement, brand storytelling
Linktree	Link aggregation	Content, community, inquiry, discovery
Straep	All of the above combined	—

Straep occupies the gap between a social platform and a business website — giving brands a social business operating system.

3.3 The Strongest Version of Straep

The product should not be positioned as "a social media app with customisable profiles." The differentiator is:

┆ Straep allows every brand to operate like a digital company from one social profile.

A professional Straep page should allow a brand to:

- Tell its brand story
- List products and services
- Accept bookings and inquiries
- Display a portfolio with testimonials
- Post content and updates
- Engage followers
- Capture leads
- Track analytics
- Use developer-made templates to improve design

4. Goals and Success Metrics

4.1 MVP Goals (Phase 1, Months 1-3)

The MVP must prove four things:

1. Brands want customisable pages and will publish them.

2. Regular users are willing to browse and discover brands.
3. Businesses receive meaningful inquiries through the platform.
4. Free plan limitations are sufficient to convert users to paid plans.

4.2 Key Performance Indicators

Metric	Target (End of Month 3)	Target (End of Month 6)
Published brand pages	500	2,000
Registered users (total)	5,000	20,000
Free → Professional upgrade rate	20%	35%
Brand pages with at least 1 inquiry received	50%	65%
Average session duration (personal users)	4 min	6 min
DAU / MAU ratio	20%	30%
Business dashboard weekly active users	60% of business accounts	70%
Template marketplace: templates available	— (Phase 4)	50+

4.3 Business Metrics

Metric	Goal
Monthly Recurring Revenue (MRR)	₦5M+ by Month 6
Average Revenue Per User (ARPU)	₦3,500/month (Professional), ₦8,000/month (Business)
Churn rate	< 10% monthly
Customer Acquisition Cost (CAC)	To be benchmarked after Month 2

5. Target Users

5.1 User Types Overview

Straep is designed around five distinct user types. Each has a different primary motivation, primary actions, and relationship to the subscription model.

User Type	Primary Motivation	Primary Actions	Revenue Relationship
Personal User	Discover and engage	Browse, follow, save, inquire	Free (converts to creators later)
Business / Brand	Grow the brand and get leads	Create page, post, manage leads	Primary paying user
Creator / Professional	Build personal brand	Showcase, book, post, grow	Paying user (Professional plan)
Developer / Designer	Earn from templates	Build, upload, sell templates	Developer plan + marketplace commission
Agency	Manage multiple clients	Multi-brand management	Highest-tier paying user

Detailed personas for each user type are documented in the **User Types and Personas** document.

5.2 Priority User Type for MVP

The MVP must serve **Business/Brand users** and **Personal users** excellently. Creator support can share the same profile setup flow as business users with minor adjustments. Developer and Agency features are Phase 4 and Phase 5 respectively.

6. Core Value Propositions

6.1 For Business and Brand Users

- One page that functions as a social profile, mini-website, storefront, and lead capture tool.
- Real customisation: brand colours, fonts, sections, layout, CTAs.
- Inquiry inbox so no lead is ever lost in a DM.
- Analytics that show profile views, inquiry count, and top-performing products.
- Template marketplace to upgrade page appearance without a designer.
- Verified badge to build trust with new customers.

6.2 For Personal / Customer Users

- Discover businesses by location, category, industry, and rating.
- Follow brands and receive updates in a useful social feed.
- Send inquiries directly from a brand's page.
- Save products and services to a wishlist.
- Join communities and participate in brand challenges.
- Read reviews and view trust signals before contacting a brand.
- Apply for job openings, internships, and collaborations.

6.3 For Creator / Professional Users

- A branded personal page more expressive than LinkedIn.
- Portfolio and service listings with booking/inquiry CTAs.
- Audience growth through content posting and feed distribution.
- Upgrade to Professional for full customisation and lead capture.

6.4 For Developer / Designer Users (Phase 4)

- A commercial marketplace to sell page templates.
 - 70% revenue share on every template sale.
 - Developer dashboard with upload, review status, and payout tracking.
 - Access to a large, growing user base already looking to upgrade their brand pages.
-

7. Feature Requirements

7.1 Authentication and Onboarding

Priority: P0 (MVP)

Requirements:

- Users can register with email, phone number, Google OAuth, or Apple Sign-In.
- Email/phone verification is required before the account is active.
- After verification, users must select an account type.
- Account types: Personal, Business/Brand, Creator/Professional, Developer, Agency.
- Each account type leads to a different onboarding flow and landing destination.
- Forgot password via email/SMS OTP.
- JWT authentication (access token + refresh token pattern).
- Sessions expire after 30 days of inactivity.

Acceptance Criteria:

- ☐ User can register with email and verify via OTP.
 - ☐ User can log in with email/password.
 - ☐ User can log in with Google.
 - ☐ Account type selection screen is shown after verification.
 - ☐ Incorrect account type can be changed in settings (within 30 days of registration only).
 - ☐ Business users land on the Business Dashboard after onboarding.
 - ☐ Personal users land on the Home Feed after onboarding.
-

7.2 Brand Page Builder

Priority: P0 (MVP)

Requirements:

- Every Business, Creator, and Agency account can create one brand page on the Free plan.
- Business plan accounts can have multiple locations (Phase 3).
- The brand page editor has three panels: section list (left), live preview (centre), section settings (right).
- Top bar: preview toggle (desktop/mobile), save draft, publish.
- All changes autosave as a draft every 30 seconds.
- Publish action makes the page publicly visible at `/profile/:username`.
- Free plan: 3 starter templates, basic layout, no colour or font customisation.
- Professional plan: full customisation, unlimited sections, custom colours and fonts.
- Locked features show an inline "upgrade" prompt rather than an error.

Customisable elements:

- Header layout (logo, cover image, tagline positioning)
- Brand colour palette (primary, secondary, accent)
- Font family (body and heading)
- Page sections (add, remove, reorder)
- CTA button labels and link destinations
- Products section
- Services section
- Testimonials section
- Portfolio/gallery section
- About/story section
- Contact section
- Social links
- Custom HTML section (Business plan only)

Acceptance Criteria:

- ☐ Business user can publish a brand page in under 10 minutes.
 - ☐ Free user can select from 3 templates.
 - ☐ Clicking a locked feature shows upgrade modal with specific benefit listed.
 - ☐ Page editor autosaves draft every 30 seconds.
 - ☐ Preview mode shows accurate desktop and mobile representations.
 - ☐ Published brand page is accessible publicly at `/profile/:username`.
-

7.3 Brand Page Public View

Priority: P0 (MVP)

Requirements:

- The public brand page is the face of the brand on Straep.
- It must include: header with logo, cover, brand name, verified badge (if applicable), category, location, follow button, message/inquiry button.

- Below the header: About section, Products/Services section, Posts, Reviews (Phase 3), Portfolio, Contact, Social links.
- Every page must display at least one visible CTA: Follow, Send Inquiry, Request Quote, Book, Message, or View Product.
- Follow button: updates follower count in real time; unfollows on second click.
- Send Inquiry / Request Quote: opens inquiry modal.
- Message: opens Straep messaging (logged-in users only).
- Brand page must render correctly on mobile.

Acceptance Criteria:

- ☐ A user who visits a brand page can see all published sections.
 - ☐ Follow button works correctly and updates count.
 - ☐ Inquiry modal opens on "Send Inquiry" click.
 - ☐ Page loads in under 2 seconds on a 4G connection.
 - ☐ Page is mobile-responsive.
 - ☐ Unverified brands do not show the verified badge.
-

7.4 Digital Storefront (Products and Services)

Priority: P0 (MVP)

Requirements:

Products:

- Name, description, price, currency, category, images (up to 5), availability status, delivery note, inquiry/order button.
- Free plan: up to 5 products.
- Professional plan: up to 20 products.
- Business plan: unlimited.

Services:

- Name, description, starting price, currency, duration (optional), consultation option (yes/no), portfolio proof (image/link), booking or inquiry button.
- Free plan: up to 3 services.
- Professional plan: up to 10 services.
- Business plan: unlimited.

MVP selling model: Inquiry-based only (no checkout). Users click "Send Inquiry" on a product/service which pre-fills the inquiry form with the product/service name.

Acceptance Criteria:

- ☐ Brand can add a product with all required fields.
- ☐ Free users cannot add more than 5 products (prompted to upgrade at limit).
- ☐ Product images display correctly in the storefront.
- ☐ Clicking "Send Inquiry" on a product pre-fills the inquiry form with the product name.
- ☐ Product availability status is visible on the card.

7.5 Inquiry and Lead Management

Priority: P0 (MVP)

Requirements:

Customer inquiry flow:

1. User visits brand page.
2. Clicks "Send Inquiry," "Request Quote," or any product/service inquiry button.
3. Inquiry modal opens with fields: Name, Message, Product/service of interest (pre-filled if from product), Preferred contact method.
4. Guest users can send inquiries (no login required).
5. On submission, user sees confirmation message.
6. Brand receives inquiry in their lead dashboard.
7. Brand receives email notification + in-app notification.

Business lead dashboard:

- Displays all inquiries sorted by date (newest first).
- Each row shows: customer name, product/service interest, date, status badge, message preview (first 80 characters).
- Lead detail view: full message, contact preference, customer profile link (if user is registered), reply action, status selector, notes field.
- Lead statuses: New, Contacted, In Discussion, Converted, Closed, Rejected.
- Bulk actions: mark as read, change status, delete.
- Filter by status, date range.

Acceptance Criteria:

- ☐ Guest users can submit an inquiry without registering.
 - ☐ Brand receives email notification within 60 seconds of inquiry submission.
 - ☐ Lead status can be changed by brand in the dashboard.
 - ☐ Dashboard correctly shows inquiry count on the overview page.
 - ☐ Conversion rate metric updates when a lead is marked "Converted."
-

7.6 Social Feed

Priority: P0 (MVP)

Requirements:

- Home feed shows posts from followed brands + recommended posts.
- Feed algorithm initially uses followed brands, then supplements with similar categories.
- Post types: Text, Image, Video (Phase 2), Product Update, Offer, Event, Poll, Opportunity.

- Feed should mix business, educational, community, and opportunity content — not feel like only advertisements.
- Per-post actions: Like (heart), Comment, Share (copy link / share to...), Save, Follow author, Visit brand page, Report.
- Feed supports cursor-based infinite scroll pagination.
- Unauthenticated visitors can see a limited public feed on the landing page.

Acceptance Criteria:

- ☐ Authenticated users see a personalised feed on the Home screen.
 - ☐ New users (no follows) see a recommended feed based on their selected interests.
 - ☐ Each post has working Like, Comment, Save, and Share actions.
 - ☐ Reported posts go to the admin moderation queue.
 - ☐ Feed loads the next page automatically when the user scrolls to 80% of current content.
-

7.7 Discover Page

Priority: P0 (MVP)

Requirements:

- Search bar at the top (searches brands, products, services, categories).
- Category browsing (tiles/chips for top categories).
- Location-based discovery (uses device location or manually set location).
- Filter panel: Industry, Location, Category, Rating, Verified status, Offers available, Price range, Popularity.
- Search results display: Brand cards, Product cards, Service cards.
- Sections: Featured brands, Trending brands, Verified brands, New on Straep, Recommended for you.

Brand card includes:

- Logo, brand name, verified badge, category, location, follower count, rating (Phase 3), follow button.

Acceptance Criteria:

- ☐ Searching for a business name returns the correct brand.
 - ☐ Category filter returns only brands in that category.
 - ☐ Location filter returns brands in the specified location.
 - ☐ Verified filter returns only verified brands.
 - ☐ Clicking a brand card opens the public brand page.
-

7.8 Post Creation

Priority: P0 (MVP)

Requirements:

- Accessible via bottom navigation "Create" button for logged-in users.
- Post type selection step: Text, Image, Product Update, Offer, Event, Poll, Opportunity (Video in Phase 2).
- Text post: plain text with optional formatting (bold, italic, links).
- Image post: up to 8 images, caption.
- Product update: attach a product from the storefront + text.
- Offer: headline, description, discount amount or code, expiry date.
- Event: title, description, date/time, location, registration link.
- Poll: question, 2-4 options, duration.
- Opportunity: title, type (job/internship/collaboration), description, requirements, deadline.
- Optional: attach a product/service to any post type.
- Preview step before publish.
- Published posts appear in followers' feeds and on the brand page's Posts tab.

Acceptance Criteria:

- ☐ User can create and publish a text post in under 60 seconds.
 - ☐ Image post correctly displays all uploaded images.
 - ☐ Poll post shows vote percentages after a user votes.
 - ☐ Published post appears in the brand's page Posts tab immediately.
 - ☐ Post appears in followers' Home feeds within 60 seconds of publishing.
-

7.9 Subscription and Upgrade System

Priority: P0 (MVP)

Requirements:

- Five plans: Free, Professional, Business, Agency, Developer.
- Billing cycles: Monthly and Yearly (yearly saves approximately 20%).
- Payment providers: Pystack (primary, Nigeria/Africa), Stripe (global, Phase 2).
- Locked feature UI: instead of hiding locked features, show them with a lock overlay and upgrade prompt.
- Upgrade modal: triggered when a user clicks a locked feature. Shows current limitation, benefit, and "Upgrade Now" CTA.
- Pricing page: side-by-side plan comparison with monthly/yearly toggle.
- After successful payment, user is redirected back to the feature they were trying to access.
- Subscription management: view current plan, cancel (with period-end scheduling), upgrade, downgrade.
- Webhook-only subscription activation (never trust client redirect).

Acceptance Criteria:

- ☐ Free user clicking a locked feature sees an upgrade modal with the specific feature described.

- ☐ Payment via Pystack completes successfully in test mode.
 - ☐ Subscription activates via webhook, not client redirect.
 - ☐ After upgrade, the user is redirected to the feature they clicked before upgrading.
 - ☐ Billing dashboard shows current plan, renewal date, and payment history.
 - ☐ Cancelled subscription remains active until period end.
-

7.10 Business Dashboard

Priority: P0 (MVP)

Requirements:

- Dashboard is the first screen business and creator users see after login.
- Overview section shows key metrics: Profile views (last 7 days), New followers, Post engagement rate, Product/service views, Inquiry count, Conversion rate, Saved products count.
- Quick action buttons: Edit brand page, Add product, Create post, View leads.
- Dashboard sections (left sidebar navigation): Overview, Brand Page, Storefront, Posts, Leads, Analytics, Templates, Subscription, Settings.
- Analytics section (Professional+): detailed breakdown of views over time, traffic sources, top posts, top products/services, follower growth chart.

Acceptance Criteria:

- ☐ Business user sees dashboard after login (not the public feed).
 - ☐ Overview metrics are accurate and match actual data.
 - ☐ Navigation between dashboard sections works without page reload.
 - ☐ Analytics section is locked for Free users with an upgrade prompt.
-

7.11 Template Marketplace (Phase 4)

Requirements:

- Users can browse templates by category.
 - Template detail page: preview, screenshots, features, compatible sections, developer info, price, install CTA.
 - Free templates can be installed directly. Paid templates require purchase.
 - After install, template appears in "My Templates" and can be applied via the brand page editor.
 - Developer dashboard: upload, review status, sales analytics, payout requests.
 - Template review queue: admin approves/rejects submitted templates.
 - Revenue split: 70% developer, 30% Straep.
-

7.12 Communities (Phase 3)

Requirements:

- Brands and users can create communities around a topic.
 - Communities include: posts, discussions, polls, events, challenges.
 - Users join communities from their profile or from a brand page's community section.
 - Community feed is separate from the main feed.
-

7.13 Reviews and Trust System (Phase 3)

Requirements:

- Users who have sent an inquiry or purchased a service can leave a review.
 - Reviews include: star rating (1-5), written review, reviewer name and photo.
 - Brands can respond to reviews.
 - Verified badge available after document submission and admin approval.
 - Brand page shows: overall rating, number of reviews, response rate, verification status.
-

8. Subscription and Business Model

8.1 Plan Structure

Feature	Free	Professional	Business	Agency	Developer
Brand pages	1	1	3	20	—
Products/services	5 products, 3 services	20 products, 10 services	Unlimited	Unlimited	—
Templates	3 basic	All free + premium	All	All	—
Brand page customisation	Basic layout only	Full	Full	Full	—
Custom colours/fonts	No	Yes	Yes	Yes	—
Analytics	Basic	Advanced	Advanced	Bulk	—
Lead/inquiry management	Basic (10 leads)	Full (unlimited)	Full + automation	Full + client view	—
Remove Straep branding	No	Yes	Yes	Yes	—
Team members	No	No	3	10	—
Verified badge eligibility	No	Yes	Yes	Yes	—

Feature	Free	Professional	Business	Agency	Developer
Opportunity posting	No	No	Yes	Yes	—
Template upload/sell	No	No	No	No	Yes
Revenue dashboard	No	No	No	No	Yes

8.2 Revenue Streams

Stream	Model	Phase
Subscriptions	Monthly / yearly recurring	Phase 1
Template marketplace commission	70/30 split per sale	Phase 4
Featured/boosted listings	Pay-per-boost, daily/weekly	Phase 2
Verification badge fee	One-time, after document review	Phase 3
Promoted posts	Pay-per-impression	Phase 3
Transaction fees	% of transaction when checkout launches	Phase 5
Agency tools	Highest-tier subscription	Phase 5
Premium analytics	Add-on reports for Business+	Phase 3

8.3 Suggested Pricing (Nigerian Market)

Plan	Monthly	Yearly
Free	₦0	₦0
Professional	₦4,500	₦43,200 (save 20%)
Business	₦12,000	₦115,200 (save 20%)
Agency	₦35,000	₦336,000 (save 20%)
Developer	₦2,500	₦24,000 (save 20%)

International pricing via Stripe to be set based on currency equivalency at launch.

9. Non-Functional Requirements

9.1 Performance

- Brand page public view must load in under 2 seconds on a 4G connection.

- API response time for all standard endpoints: under 300ms at p95.
- Feed API endpoint: under 500ms at p95.
- Image uploads: Cloudinary processing within 5 seconds.
- The system must handle 1,000 concurrent users without degradation at launch.

9.2 Security

- All API endpoints require authentication except: brand page public view, inquiry submission (guest allowed), discover/search, public feed, pricing page.
- Passwords hashed with bcrypt (minimum 12 rounds).
- JWT tokens: access token expires in 15 minutes, refresh token in 30 days.
- HTTPS enforced across all endpoints.
- Payment data never stored on Straep servers; handled entirely by Paystack/Stripe.
- Webhook signatures must be verified before processing subscription events.
- File uploads: validate MIME type and file size on the server; do not trust client-side validation.
- Rate limiting: 60 requests/minute per IP for unauthenticated endpoints; 300 requests/minute per authenticated user.

9.3 Scalability

- Stateless backend design: sessions stored in Redis, not server memory.
- Database reads for the public brand page served from a Redis cache with a 5-minute TTL.
- Feed pre-computation via Celery background tasks (fan-out on write for brands with under 10,000 followers; fan-out on read above that threshold).
- Media (images, video) served from Cloudinary CDN, not directly from the server.

9.4 Accessibility

- WCAG 2.1 Level AA compliance.
- All interactive elements must be keyboard navigable.
- All images must have descriptive alt text.
- Minimum contrast ratio of 4.5:1 for body text.

9.5 Mobile First

- All screens designed for mobile first (minimum viewport: 375px).
- Desktop layouts derived from mobile layouts via responsive breakpoints.
- Bottom navigation bar for mobile users.
- Touch targets minimum 44×44px.

9.6 Availability

- Target uptime: 99.5% (allows approximately 3.6 hours/month of downtime).
- Scheduled maintenance windows: Sunday 2:00 AM – 4:00 AM WAT (announced 48 hours in advance).

10. Constraints and Assumptions

10.1 Constraints

- MVP must be built and launched within 3 months with a small engineering team (assumed: 2 backend developers, 1 frontend developer, 1 UI/UX designer).
- Payment infrastructure in Phase 1 uses Paystack only (no Stripe until Phase 2).
- Video post support is deferred to Phase 2 due to infrastructure cost (Cloudinary video delivery pricing).
- Template marketplace deferred to Phase 4; page builder must be designed with template extensibility in mind from Phase 1.
- No native mobile app in MVP; the web app must be fully functional on mobile browsers.

10.2 Assumptions

- The primary target market for launch is Nigeria; currency default is NGN.
 - Most users will access Straep via mobile browser (estimate: 75%+ mobile traffic).
 - Brands in the MVP will be primarily small-to-medium businesses: consultants, fashion brands, schools, creatives, service providers, restaurants.
 - Email deliverability via Resend will be sufficient for transactional emails at launch volume.
 - Cloudinary free tier will cover media storage during the first 2 months; plan upgrade expected by Month 3.
-

11. Out of Scope (MVP)

The following features are explicitly deferred and must not be built in Phase 1:

- Full e-commerce checkout (cart, payment, order management)
- Video posts (Phase 2)
- In-app real-time messaging (Phase 3; inquiry system covers Phase 1)
- Push notifications via mobile (web notifications only in Phase 1)
- Community features (Phase 3)
- Reviews and ratings system (Phase 3)
- Template marketplace (Phase 4)
- Developer dashboard (Phase 4)
- Agency dashboard (Phase 5)
- Native mobile app (Phase 5)
- AI content assistant (Phase 5)
- Ads manager (Phase 5)
- Business verification documents (Phase 3)
- Multi-location brand pages (Phase 3)
- Automated lead responses (Phase 3)

- Reward/points system (Phase 5)
- Opportunity board (Phase 3)

12. Risks

Risk	Likelihood	Impact	Mitigation
Low brand page creation rate	Medium	High	Streamline onboarding to under 10 minutes; add template selection to reduce blank-page anxiety
Low personal user engagement (no businesses to discover)	High	High	Seed initial brand pages manually; focus on invite-first launch in a specific city or industry
Brands sign up but don't receive inquiries, so don't upgrade	Medium	High	Actively coach brands on profile completeness; show a "profile strength" score
Paystack integration delays	Low	Medium	Test Paystack integration in Week 1 of development; do not defer to Week 6
Spam inquiries discourage brands	Medium	Medium	CAPTCHA on inquiry form; rate-limit inquiries per IP per brand per 24 hours
Template marketplace quality control	Medium	Medium	Mandatory admin review before any template goes live; publish clear design guidelines
Django performance under feed load	Medium	Medium	Cache feed in Redis from Week 1; do not serve feed directly from database

13. Glossary

Term	Definition
Brand page	The public-facing customisable page for a business, creator, or professional on Straep
Brand page editor	The drag-and-drop interface used by brand owners to customise their brand page
Inquiry	A message sent by a user to a brand, typically expressing interest in a product or service
Lead	An inquiry received by a brand; managed in the leads dashboard

Term	Definition
Lead status	A label applied to a lead by the brand: New, Contacted, In Discussion, Converted, Closed, Rejected
Professional Mode	Informal name for the Professional subscription plan
Template	A pre-designed brand page layout created by a developer and installable by a brand
Storefront	The section of a brand page showing products and services
Plan gating	The system that restricts access to premium features based on subscription plan
Fan-out on write	A feed strategy where a new post is pushed to all follower feed caches at publish time
WAT	West Africa Time (UTC+1), the primary timezone for the launch market
