

Straep — User Workflows

Version: 1.0

Document owner: Product / UX Team

Purpose: Step-by-step flows for every major user action. Used by designers for wireframes and engineers for route planning and state management.

1. How to Read This Document

Each workflow contains:

- **Goal:** What the user is trying to achieve.
 - **Actor:** Who performs this workflow.
 - **Preconditions:** What must be true before the workflow begins.
 - **Happy path:** The step-by-step flow when everything works.
 - **Decision points:** Steps where the user makes a choice or the system branches.
 - **Error paths:** What happens when something goes wrong.
 - **Postconditions:** What is true after the workflow completes successfully.
 - **UI notes:** Design guidance for each step.
 - **Engineering notes:** Backend actions, API calls, state changes.
-

2. WF-01: New User Registration and Onboarding

Goal: Allow a new user to join Straep, verify their account, and complete onboarding so they land in the right place.

Actor: Any new user.

Preconditions: User has not previously registered on Straep.

Happy Path

Step 1: Entry

User visits `straep.com`

→ Clicks "Get Started" (hero CTA) or "Sign Up" (header nav)

→ Navigates to `/auth/get-started`

Step 2: Registration method selection

Screen shows four options:

[Continue with Google]

[Continue with Apple] ← Phase 5 (iOS app)

[Sign up with Email]

[Sign up with Phone]

User selects one.

Step 3a: Email registration

User enters:

- Email address

- Password (min 8 chars, 1 uppercase, 1 number)

- Confirm password

User clicks "Create Account"

→ System creates a pending account (unverified)

→ System sends a 6-digit OTP to the email

→ User is navigated to `/auth/verify-email`

Step 3b: Phone registration

User enters:

- Phone number (with country code selector)

- System sends SMS OTP

→ User is navigated to `/auth/verify-phone`

Step 3c: Google OAuth

User is redirected to Google

→ Grants permission

→ Google returns user profile (name, email, photo)

→ System creates account (pre-verified; no OTP needed)

→ Proceeds to Step 4 directly

Step 4: OTP verification (email/phone only)

User sees a 6-input field for the OTP code.

User enters the 6-digit code received.

→ On correct code: account is verified. Proceed to Step 5.

→ On wrong code: show "Incorrect code. X attempts remaining."

→ On 3 failures: show "Too many attempts. Request a new code in 15 minutes."

→ "Resend code" link available after 60 seconds.

Step 5: Account type selection

Full-screen step. Shows 5 cards:

[Personal Account]

[Business / Brand Account]

[Creator / Professional Account]

[Developer / Designer Account]

[Agency Account]

Each card: icon, name, description, 3 bullet points.

"Not sure?" expandable helper text.

User taps/clicks one card (card is highlighted).

"Continue" button activates.

User clicks "Continue."

Step 6: Profile setup (varies by account type)

→ Personal: display name, username, profile photo (optional), short bio (optional)

→ Business: business name, category, industry, location, short description

→ Creator: display name, professional title, category, bio

→ Developer: display name, professional bio

→ Agency: agency name, location, description

Fields marked required are validated before proceeding.

Step 7: Interests / category selection

User selects 3-8 interest tags from a visual tag list.

These drive feed recommendations.

"Skip" is available but discouraged (nudge copy: "Picking interests helps us show you the most relevant brands.").

Step 8: Suggested follows

Grid of 8-12 brand/creator cards based on selected interests.

Each card has a Follow button (can follow multiple).

User can follow 0 or more and clicks "Continue."

Step 9: Onboarding completion

Screen shows: "You're all set, [Name]!"

Displays 3 next-step CTAs based on account type:

→ Personal: "Explore brands," "Browse the feed," "Complete your profile"

→ Business: "Publish your brand page," "Add your first product," "Create a post"

→ Creator: "Set up your portfolio," "Add your services," "Create a post"

User clicks any CTA or "Go to Straep."

Step 10: Landing destination (by account type)

Personal / Creator → /home (feed)

Business / Agency → /dashboard

Developer → /dev

Decision Points

Point	Options	Outcome
Registration method	Email / Phone / Google	Branches to different verification steps
OTP verification	Correct / Wrong / Expired	Proceed / Retry / Resend
Account type selection	5 options	Determines onboarding flow and landing destination
Interests selection	Skip / Select	Skip produces a generic recommendation feed
Suggested follows	Follow any / Skip	Affects initial feed quality

Error Paths

Error	Trigger	Resolution
Email already registered	User enters an email that exists	Show: "An account with this email already exists. Sign in instead?" with link
Username taken	Username entered is already in use	Show inline: "This username is taken. Try [suggested_alternatives]."
Weak password	Password fails validation	Inline error per rule not met
OTP expired	User waits more than 10 minutes	Show: "Code expired. Request a new one."
Google OAuth failed	Google returns an error	Show: "Couldn't connect with Google. Try signing up with email instead."

Postconditions

- User account is created and verified in the database.
- User profile record exists with account type set.
- User's interest tags are stored.
- User follows at least 0 brands.
- User is authenticated (JWT issued).
- User is on their correct landing page.

Engineering Notes

- Sending OTP: add to Celery queue; use Resend (email) or a bulk SMS provider.
 - Username uniqueness: check on blur + on submit.
 - Google OAuth: handle both new account creation and "sign in with Google" for existing accounts (check email match).
 - Store `onboarding_step` on the User model to handle resume-on-re-login.
 - On Step 10: redirect is determined by `user.account_type` from the `/auth/me` response.
-

3. WF-02: Business Creates and Publishes Brand Page

Goal: Allow a business user to create, configure, and publish their brand page.

Actor: Business/Brand or Creator/Agency account.

Preconditions: User is authenticated and has completed onboarding.

Happy Path

Step 1: Brand page setup (during or after onboarding)
After business onboarding, user is prompted: "Let's set up your brand page."
OR user navigates to /dashboard → clicks "Set Up Brand Page" quick action.

Step 2: Business details (pre-filled from onboarding)
Fields: Business name, Category, Industry, Location (city/country), Website (optional), Short description (max 160 chars).
User reviews or edits pre-filled values.
User clicks "Next."

Step 3: Brand identity upload
User uploads:
- Logo (PNG/JPG, recommended 400×400px, max 5MB)
- Cover image (recommended 1600×400px, max 10MB)
Preview of how the header will look is shown in real time.
Uploads can be skipped (Straep shows a placeholder logo and gradient cover).
User clicks "Next."

Step 4: Template selection
Grid shows 3 free templates (Free plan) or all templates (Professional+).
Each template has a preview thumbnail and "Preview" link.
Premium templates show a lock icon with "Professional" badge.
User selects one template.
User clicks "Use This Template."

Step 5: Quick section setup (guided)
Guided setup for key sections (3 steps):
5a. About: user enters/confirms brand description.
5b. Add first product or service: simplified form (name, price, quick description). Can be skipped.
5c. Contact: confirm email, optionally add WhatsApp number and social links.
User clicks "Next" on each or "Skip."

Step 6: Preview
Full brand page preview shown (desktop view by default; mobile toggle available).
User reviews their page.
CTA: "Looks good – Publish" or "Go back to edit."

Step 7: Publish
User clicks "Publish."
Confirmation prompt: "Your brand page will be live at `straep.com/p/[username]`. Continue?"
User confirms.
→ BrandPage.is_published set to true in the database.
→ Page becomes accessible at `/p/:username`.
→ User sees success screen.

Step 8: Post-publish next steps
Success screen: "Your brand page is live!"
Shows the public URL with a copy link and share buttons.
Next step CTAs:
- "Add more products" → `/dashboard/storefront/products/add`
- "Create your first post" → `/create`
- "Upgrade to Professional" → `/dashboard/subscription/upgrade` (if on Free)
- "View your page" → `/p/:username` (opens in new tab)

Decision Points

Point	Options	Outcome
Logo/cover upload	Upload / Skip	Skip shows placeholder visuals
Template selection	Free (3) / Premium (locked)	Clicking locked template shows upgrade prompt

Point	Options	Outcome
Quick section setup	Complete / Skip each	Skipped sections can be added later in the editor

Error Paths

Error	Resolution
Logo file too large	"File too large. Maximum size is 5MB. Please compress and re-upload."
Invalid file type	"Only PNG, JPG, and SVG are accepted for the logo."
Username already in use (if changed)	Suggest alternatives

Postconditions

- `BrandPage` record created and published in the database.
- Brand page accessible at `/p/:username`.
- Brand page appears in Discover search results (indexed within 5 minutes).
- Dashboard overview shows the brand page metrics (initially all zeros).

4. WF-03: Brand Page Customisation (Professional Mode)

Goal: Allow a Professional plan user to deeply customise their brand page.

Actor: Business or Creator on Professional, Business, or Agency plan.

Preconditions: Brand page exists; user is on Professional plan or above.

Happy Path

Step 1: Enter editor User opens <code>/dashboard</code> → clicks "Brand Page" → clicks "Edit Page." → Navigates to <code>/dashboard/brand-page/editor</code>. Editor loads with current published state (or last saved draft). Layout: Left sidebar (sections list), Centre (live preview), Right panel (section settings).
Step 2: Reorder sections User drags sections in the left sidebar to reorder. Preview updates in real time to reflect new order.

Step 3: Edit a section

User clicks a section in the left sidebar or directly in the preview.

Right panel shows that section's settings.

User edits settings (e.g., About section: edits description text, toggles visibility).

Preview updates in real time.

Step 4: Design customisation (Professional+)

User clicks "Design" in the top nav of the editor.

Right panel shows:

- Primary colour (colour picker + hex input)
- Secondary colour
- Button style selector (Solid / Outline / Rounded / Square)
- Heading font (dropdown of 10 options)
- Body font (dropdown of 10 options)

Preview updates in real time as each setting changes.

Step 5: Switch template

User clicks "Template" in editor nav.

Template selection grid opens (centre panel).

User previews a different template.

User selects "Apply Template."

Confirmation: "Switching templates will apply the new layout. Your content will be preserved."

User confirms. Preview updates.

Step 6: Add a new section

User clicks "Add Section" at the bottom of the left sidebar.

A panel shows available section types: Testimonials, Portfolio, FAQ, Team, Video, Custom CTA, Custom HTML.

User selects a section type.

Section appears at the bottom of the page and is selected in the right panel.

User fills in section content.

Step 7: Preview desktop and mobile

User clicks "Preview" in the top bar.

Preview mode opens full-screen.

Desktop / Mobile toggle at the top.

User can scroll through the full page in preview mode.

"Back to editor" returns to the editor.

Step 8: Save draft

Autosave runs every 30 seconds.

User can also click "Save Draft" manually.

Toast notification: "Draft saved."

Draft does not update the live public page.

```
Step 9: Publish
User clicks "Publish."
If there are unsaved changes, they are saved and published together.
Confirmation prompt: "Publish these changes? Your live page will be updated."
User confirms.
→ BrandPage record updated in database.
→ Redis cache for this brand page is invalidated.
→ New version is live within 5 seconds.
Toast: "Your page is published!"
```

Engineering Notes

- The page editor uses `sections_json` (JSONB column on `BrandPage`).
 - Autosave sends a PATCH to `/brands/:id/sections` every 30 seconds if dirty state is detected.
 - Preview mode renders the brand page component with the current draft state (not the published state).
 - On publish: update `BrandPage.is_published = true`, `BrandPage.sections_json = draft_sections_json`, invalidate Redis cache key `brand_page:{brand_id}`.
-

5. WF-04: Customer Discovers Brand and Sends Inquiry

Goal: Allow a regular user to find a brand and submit an inquiry.

Actor: Personal user (logged in or guest).

Preconditions: At least one published brand page exists on the platform.

Happy Path

```
Step 1: Entry to Discover
User taps "Discover" in the bottom navigation.
→ Navigates to /discover.
Sees: search bar, category chips, featured brands, trending brands.
```

```
Step 2: Search or browse
Option A – Search: User types in the search bar.
  Debounced results appear (300ms delay).
  Results shown in tabs: Brands, Products, Services.
Option B – Category: User taps a category chip (e.g., "Fashion").
→ /discover/category/fashion
Shows all brands in that category.
```

```
Step 3: Apply filters (optional)
User opens filter panel.
Sets filters: Location (Lagos), Verified (on).
Results update.
```

Step 4: Select a brand

User taps a brand card.

→ Navigates to /p/:username.

Brand page loads with: header, action bar (Follow, Message, Send Inquiry), tabs (About, Products, Services, Posts).

Step 5: Explore the brand page

User reads the brand description.

User taps "Products" tab → sees product grid.

User taps a product → product detail page opens (within brand page context).

User taps "Posts" tab → sees brand's posts.

Step 6: Initiate inquiry

User taps "Send Inquiry" button (sticky in action bar).

Inquiry modal slides up from the bottom.

Step 7: Fill inquiry form

If logged in: Name and contact are pre-filled; user sees and can edit them.

If guest: Fields are empty; name is required.

Fields:

- Full name (required)
- Message (required, max 500 chars, character counter shown)
- Product/service of interest (pre-filled if came from product; otherwise a text field or dropdown)
- Preferred contact method: [Straep message] [WhatsApp] [Email]

CAPTCHA challenge (invisible reCAPTCHA v3 or Cloudflare Turnstile).

User fills fields and clicks "Send Inquiry."

Step 8: Submission

→ POST to /brands/:brandId/inquiries

→ Inquiry record created in database.

→ Celery task queued: send email notification to brand owner.

→ In-app notification created for brand owner.

Modal closes.

Confirmation screen replaces modal: "Inquiry sent! [Brand Name] usually responds within [X] hours."

CTAs: "Follow [Brand Name]" | "Explore more brands."

Step 9: Brand receives inquiry

Brand owner receives:

- Email notification (within 60 seconds).
- In-app notification (bell icon badge).

Inquiry appears in /dashboard/leads with status "New."

Error Paths

Error	Resolution
Rate limit hit (3 inquiries to same brand in 24 hours)	"You've already contacted this brand recently. Please wait before sending another inquiry."
Form submitted without required fields	Inline validation errors under each field
Network error during submission	"Something went wrong. Please check your connection and try again." Retry button.

Postconditions

- Inquiry record exists with status "New."
- Brand owner notified via email and in-app.
- Inquiry count on the business dashboard increments.

6. WF-05: Business Manages Leads

Goal: Allow a business to review, respond to, and manage incoming customer inquiries.

Actor: Business, Creator, or Agency account.

Preconditions: At least one inquiry has been received.

Happy Path

Step 1: Navigate to Leads

User opens /dashboard → clicks "Leads" in left sidebar.

→ Navigates to /dashboard/leads.

Step 2: Leads inbox

Inbox shows all inquiries, newest first.

Filter tabs across the top: All | New | Contacted | In Discussion | Converted | Closed.

Each row: avatar/initials, sender name, product/service interest, date, status badge, message preview.

Unread rows are bold.

User clicks a row.

Step 3: Lead detail view

Full detail page opens at /dashboard/leads/:id.

Shows:

- Sender name and Straep profile link (if registered user)
- Full message
- Product/service of interest
- Preferred contact method
- Date and time submitted
- Status selector (dropdown)
- Notes field (private, for the brand only)
- Action buttons: Reply, Mark Converted, Close, Reject

Step 4: Respond to lead

User clicks "Reply."

Phase 1: Opens the sender's preferred contact method:

- If WhatsApp: opens wa.me link with pre-filled message.
- If email: opens mailto link with pre-filled subject.
- If Straep message: opens messaging thread (Phase 3).

Status automatically changes from "New" to "Contacted" when reply is initiated.

Step 5: Update status

User selects new status from the dropdown: In Discussion, Converted, Closed, Rejected.

User optionally adds a private note (e.g., "Client is comparing quotes. Follow up Friday.").

User clicks "Save."

→ Inquiry status updated in database.

→ Dashboard conversion rate metric recalculates.

Step 6: Return to inbox

User clicks "Back to Leads."

The updated status badge is visible in the row.

Decision Points

Point	Options	Outcome
Reply method	WhatsApp / Email / Straep message	Opens corresponding channel
Status change	New / Contacted / In Discussion / Converted / Closed / Rejected	Updates dashboard metrics
Mark as Converted	Yes	Conversion rate and "Converted" count update

Postconditions

- Inquiry status is updated in the database.
 - Dashboard conversion rate is recalculated.
 - Lead is no longer shown as "New" in the inbox.
-

7. WF-06: User Engages With the Feed

Goal: Keep a personal user engaged and returning to the platform daily.

Actor: Personal user (logged in).

Happy Path

Step 1: Open Home Feed

User opens Straep app → lands on /home.

Feed loads with a mix of content:

- Posts from followed brands
- Recommended posts based on interests
- Offer posts with countdown timers
- Educational posts
- Opportunity posts

Step 2: Consume content

User scrolls through the feed.

Each post card shows: author, timestamp, content, engagement bar.

Step 3: Engage with a post

User double-taps an image → Like (optimistic UI: heart icon fills immediately).

User taps "Comment" → comment input opens below the post. User types and submits comment.

User taps "Save" → post added to /saved. Icon toggles to filled state.

User taps "Share" → share sheet opens: copy link, share to WhatsApp, share to Twitter.

Step 4: Visit a brand page from the feed

User taps the author's name or avatar.

→ Brand page opens at /p/:username.

User sees brand's full page, products, and more posts.

User taps "Follow" → now following the brand.

User returns to feed (back button).

Step 5: Save a product from the feed

A product update post shows a product card embedded in the post.

User taps "Save" on the product card.

Product is added to /saved/products.

Toast: "Saved to your Wishlist."

Step 6: Apply for an opportunity

An opportunity post appears in the feed.

User taps "Apply."

→ If the opportunity links to an external URL: opens in browser.

→ If "Apply on Straep": opens an application form (Phase 3).

Step 7: Feed refreshes

On pull-to-refresh, the feed checks for new posts since the last cursor.

New posts are inserted at the top.

A banner "X new posts" appears if new posts are available while the user is reading.

Recommendation Loop

After each engagement action (like, save, follow, visit), the system updates the user's interest signal:

- `UserInterestSignal.update(user_id, category, weight_delta)` is called asynchronously via Celery.
- The next feed generation uses updated weights.
- This improves feed relevance over time.

8. WF-07: Brand Creates a Post

Goal: Allow a brand to publish content to their followers' feeds and their brand page.

Actor: Business, Creator, or Agency account.

Happy Path

Step 1: Initiate post creation

User taps "+" (Create) in the navigation bar.

→ Full-screen post type selection screen opens.

Post types shown: Text, Image, Product Update, Offer, Event, Poll, Opportunity.

User selects a post type.

Step 2: Compose content (varies by type)

TEXT POST:

- Rich text area with bold/italic/link toolbar.
- Character limit: 1,500. Counter shows remaining.

IMAGE POST:

- Image upload (1-8 images).
- Caption input (optional, 500 chars).
- After upload, user can reorder images by dragging.

PRODUCT UPDATE:

- "Select product" opens a picker showing the brand's storefront products.
- User selects one product.
- Product name, image, and price auto-populate.
- User adds a caption.

OFFER:

- Headline (80 chars).
- Description (500 chars).
- Discount value or promo code (optional).
- Expiry date/time picker.

EVENT:

- Event title.
- Description.
- Start date + time, End date + time.
- Location (address field or "Online" toggle + link).
- Registration link (optional).

POLL:

- Question (120 chars).
- Options (2-4; each 40 chars).
- Duration selector: 1 day, 3 days, 7 days.

OPPORTUNITY:

- Type selector: Job, Internship, Collaboration, etc.
- Title.
- Full description.
- Requirements.
- Application deadline.
- "Apply on Straep" toggle or external URL field.
- Plan check: show upgrade prompt if user is on Free plan.

Step 3: Attach product/service (optional, any post type)

User taps "Attach Product/Service" (available on any post type).

Picker opens showing storefront items.

User selects one item.

A small product card is embedded at the bottom of the post.

Step 4: Preview

User taps "Preview."

Full-screen preview of how the post will appear in the feed.

Shows the author header, content, media, product card (if attached), and engagement bar.

User can go back to edit or proceed to publish.

Step 5: Publish

User taps "Publish."

→ POST to /posts with post type, content, media URLs, attached product ID.

→ Post record created with is_published: true.

→ Celery fan-out task queued: push to followers' feed caches.

→ Post appears on brand page Posts tab immediately.

Success toast: "Post published!"

User is returned to the feed or dashboard.

Error Paths

Error	Resolution
Image too large	"Image exceeds 10MB. Please compress and retry."
Poll with fewer than 2 options	"Add at least 2 options to publish a poll."
Opportunity post on Free plan	Upgrade modal: "Opportunity posts are available on the Business plan."
Network error during publish	"Failed to publish. Your draft has been saved." Retry button.

9. WF-08: Subscription Upgrade (Free to Professional)

Goal: Convert a Free plan user into a paying Professional plan user.

Actor: Any brand/creator on the Free plan.

Preconditions: User has a brand page and has encountered a locked feature.

Happy Path

Step 1: Trigger

User clicks a locked feature (e.g., custom colour picker in the brand page editor).

A lock overlay is visible on the feature.

Step 2: Upgrade modal

A slide-up modal appears.

Content:

- Feature name: "Custom Brand Colours"
- Description: "Set your brand's primary and secondary colours to match your identity."
- Plan required: "Available in Professional Mode"
- Feature list: 5-6 bullets of what Professional unlocks (including the clicked feature highlighted)
- CTA button: "Upgrade to Professional – ₦4,500/month"
- Secondary link: "See all plans"
- "Maybe later" dismiss option

Step 3: Plan selection (if "See all plans" is clicked)

User is navigated to /pricing.

Monthly/yearly toggle.

All plans shown side by side.

Professional plan is highlighted as "Recommended."

User selects "Professional" and clicks "Upgrade."

Step 4: Billing cycle selection

A screen or modal asks: "Choose your billing cycle."

- Monthly: ₦4,500/month
- Yearly: ₦43,200/year (save 20%) ← recommended

User selects one.

User clicks "Continue to Payment."

Step 5: Checkout

→ POST to /subscriptions/checkout with plan and billing_cycle.

→ Backend creates a Paystack payment record.

→ Backend returns a payment URL.

→ User is redirected to Paystack's hosted checkout page.

User enters card details on Paystack.

User clicks "Pay."

Step 6: Payment processing

Paystack processes the payment.

On success:

- Paystack sends a webhook to /subscriptions/webhook.
- Backend verifies the webhook signature.
- Backend updates Subscription record: plan = "professional", status = "active".
- Feature access is unlocked immediately.
- User is redirected to /dashboard/subscription/success?returnTo=[original_feature_route].

Step 7: Success screen

Screen shows: "You're on Professional! 🎉"

Lists 5-6 newly unlocked features.

Primary CTA: "Continue" → redirects to the feature the user was trying to access (from returnTo param).

Decision Points

Point	Options	Outcome
Billing cycle	Monthly / Yearly	Different price shown
Payment	Success / Failure	Activate plan / Show failure screen

Error Paths

Error	Resolution
Payment declined	"Your payment was not completed. No charge has been made." Retry CTA.
Webhook not received	Subscription stays on Free. Celery job polls Paystack for status after 5 minutes.
User closes payment page	Return to Straep without upgrade. Modal dismissed. User can retry anytime.

Postconditions

- `Subscription` record updated to `plan: professional`, `status: active`.
- `User.plan` cached in the frontend session is refreshed.
- Locked features are unlocked across all brand page editor UI.
- Payment record stored with Paystack reference.

10. WF-09: Template Marketplace Purchase and Apply

Goal: Allow a brand to buy a premium template and apply it to their brand page.

Actor: Business, Creator, or Agency account (any plan for free templates; any paid plan for paid templates).

Happy Path

Step 1: Browse templates

User navigates to `/dashboard/templates/marketplace`.

Sees categories: Fashion, Restaurant, School, Agency, Creator, etc.

Filters: Free, Paid, Category.

User browses or searches.

Step 2: Template detail

User clicks a template card.

Template detail page shows:

- Full-page preview (desktop/mobile toggle).
- Screenshots of key sections.
- Features list.
- Compatible page sections.
- Developer name and rating.
- Price.
- "Install for Free" or "Buy – ₦X,XXX" CTA.

Step 3a: Free template – install

User clicks "Install for Free."

→ POST to /templates/:id/install.

→ TemplatePurchase record created (price: 0).

→ Template added to user's "My Templates."

Success toast: "Template installed! Apply it from My Templates."

CTA: "Go to My Templates."

Step 3b: Paid template – purchase

User clicks "Buy – ₦X,XXX."

Checkout modal or redirect to Paystack.

Payment processed (same webhook flow as subscription).

→ On success: TemplatePurchase record created.

→ Developer's earnings record updated (70% of sale).

→ Template added to user's "My Templates."

Success screen: "Template purchased! Apply it to your brand page."

Step 4: Apply template

User navigates to /dashboard/templates → "My Templates."

User clicks "Apply" on the desired template.

Confirmation: "Applying this template will replace your current layout. Your content (products, about, services) will be preserved. Continue?"

User confirms.

→ brand_page.template_id updated.

→ Brand page editor opens with the new template applied.

→ User can now customise within the template's structure.

Step 5: Customise and publish

User adjusts sections, content, and design settings within the editor.

User publishes. New template is live.

11. WF-10: Developer Uploads a Template

Goal: Allow a developer to submit a template to the marketplace.

Actor: Developer account.

Preconditions: User has a verified Developer account.

Happy Path

Step 1: Initiate upload

Developer opens /dev → clicks "Upload Template."

→ /dev/upload

Multi-step form with a progress indicator: Details → Pricing → Media → Package → Submit.

Step 2: Details

Fields:

- Template name (80 chars max)
- Category (dropdown: Fashion, Restaurant, School, Agency, Creator, Portfolio, Event, E-commerce, Consultant, Real estate, Church, General)
- Short description (160 chars, used in marketplace card)
- Full description (markdown-enabled, shown on detail page)
- Supported page sections (checklist: Header, About, Products, Services, Testimonials, Portfolio, Contact, CTA, FAQ, Team, Video)
- Compatible Straep version (auto-filled)

Developer clicks "Next."

Step 3: Pricing

- Free template: toggle "Make this template free"
- Paid template: enter price in NGN (minimum ₦500)
- Developer's estimated earnings shown: "You'll earn 70% = ₦X,XXX per sale"

Developer clicks "Next."

Step 4: Media

- Upload preview images (minimum 3; maximum 8).
- First image = marketplace card thumbnail.
- Second image = desktop full-page preview.
- Third image = mobile full-page preview.
- Additional images = section close-ups.
- Each image: max 5MB, JPG or PNG.

Developer clicks "Next."

Step 5: Package upload

- Upload ZIP file containing: metadata.json, sections/, assets/, previews/.
- Straep validates the ZIP structure on upload.
- If validation passes: green checkmark, "Package valid."
- If validation fails: error message with specific issues (e.g.,

"metadata.json is missing 'supported_sections' field").

Developer fixes issues and re-uploads if needed.

Developer clicks "Next."

```
Step 6: Review and submit
Summary of all entered information.
Developer reviews and clicks "Submit for Review."
→ Template record created with status: "pending_review."
→ Admin receives a notification in the admin panel.
→ Developer sees: "Template submitted. You'll be notified when it's reviewed
(3-5 business days)."
```

```
Step 7: Admin review and decision
Admin opens /admin/templates → pending queue.
Admin reviews template:
- Checks preview images.
- Validates package structure.
- Ensures template meets design guidelines.
- Previews template in the Straep editor.
Admin makes a decision:
- Approve → template status: "approved" → template goes live in
marketplace.
- Reject → admin enters reason → template status: "rejected" → developer
notified.
```

```
Step 8: Post-approval
Template appears in the marketplace.
Developer can track: sales, earnings, reviews in /dev/sales.
Developer requests payout when balance ≥ ₦10,000.
```

12. WF-11: Admin Moderation Flow

Goal: Allow admin staff to review and act on reported posts, pending templates, and verification requests.

Actor: Admin user.

Happy Path

```
Step 1: Admin login
Admin navigates to /admin/login.
Enters email + password.
2FA required (TOTP app or SMS OTP).
→ /admin (overview).
```

Step 2: Pending tasks

Overview shows pending task counts:

- Reported posts: [N]
- Templates awaiting review: [N]
- Verification requests: [N]
- Payment disputes: [N]

Admin clicks on the highest-priority queue.

Step 3: Reported post review (/admin/posts)

Admin sees the reported post in full.

Report details: reason, reporter, date, number of reports.

Actions:

- Dismiss report → post stays; report is closed.
- Remove post → post is hidden from feed; brand owner notified.
- Warn user → system warning sent to user's account.
- Suspend user → account suspended for 7 days; user notified.

Admin selects an action, enters an optional reason note, clicks "Confirm."

→ Action logged in audit log.

Step 4: Template review (/admin/templates)

Admin opens a pending template.

Reviews: preview images, metadata, package validation result.

Actions:

- Approve → template goes live. Developer notified.
- Reject → admin enters reason (shown to developer). Developer notified.

→ Action logged.

Step 5: Verification request (/admin/verification)

Admin opens a verification request.

Sees: business name, submitted documents (CAC certificate, ID, address proof).

Actions:

- Approve → verified badge added to brand page. Business notified.
- Request more info → admin sends a message to the business asking for specific missing documents.
- Reject → admin enters reason. Business notified.

→ Action logged.

Engineering Notes

- All admin actions are written to an `AdminAuditLog` table with: `admin_user_id`, `action`, `target_type`, `target_id`, `reason`, `timestamp`.
 - This table is immutable (no update or delete allowed, even by superadmin).
 - Admin dashboard uses standard Django admin or a custom React admin panel (custom is recommended for better UX).
-

Goal: Allow a user who has contacted a brand to leave a public review.

Actor: Personal user who has submitted an inquiry.

Phase: Phase 3.

Happy Path

Step 1: Review eligibility check

User visits /p/:username → Reviews tab.

System checks: has this user submitted an inquiry to this brand AND is it more than 48 hours ago?

→ Yes: "Write a Review" button is shown.

→ No: "You can leave a review after you've interacted with this brand."
(informational message)

Step 2: Write review

User clicks "Write a Review."

Review modal:

- Star rating selector (1-5 stars, required).

- Written review (optional, max 500 chars, character counter).

User clicks "Submit Review."

Step 3: Review published

Review appears on the brand's Reviews tab.

Brand's aggregate rating recalculates.

Rating appears on the brand card in Discover search results.

Step 4: Brand responds (optional)

Brand owner opens /p/:username → Reviews tab (they see the full review with a "Respond" option).

Brand enters a response (max 300 chars).

Response appears under the review.

14. WF-13: Business Applies for Verified Badge

Goal: Allow a business to apply for and receive a verified badge.

Actor: Business on Professional plan or above.

Phase: Phase 3.

Happy Path

Step 1: Application initiation

User opens /dashboard/settings → "Verification."

Sees: "Get Verified" section with explanation of what verification means.

User clicks "Apply for Verification."

Step 2: Document submission

User uploads:

- Business registration document (CAC certificate or equivalent).
- Government-issued ID of the director/owner.
- Proof of address (utility bill or bank statement, not older than 3 months).

User confirms: "I confirm the documents are genuine and belong to [Business Name]."

User submits.

Step 3: Review

Verification request enters the admin queue at /admin/verification.

Status shows on the user's settings page: "Verification pending. Typically reviewed within 5 business days."

Step 4: Outcome

→ Approved: Blue verified badge appears on brand page and in Discover results. Email notification sent.

→ Rejected: Email with reason. User can reapply after 30 days with corrected documents.

→ More info needed: Admin sends an in-app message requesting a specific document.

15. WF-14: User Saves and Revisits Products

Goal: Allow a personal user to save products they like and access them later.

Actor: Personal user (logged in).

Happy Path

Step 1: Save a product

User views a product (on a brand page or in the Market section).

User taps the bookmark/save icon on the product card.

→ POST to /products/:id/save.

→ SavedItem record created.

Icon toggles to filled state (optimistic UI).

Toast: "Saved to your Wishlist."

Step 2: View saved items

User navigates to /saved or /saved/products.

All saved products shown in a grid.

Each card: product image, name, price, brand name, remove button.

Step 3: Act on a saved product
User taps a saved product card.
→ Opens the product detail page.
User can tap "Send Inquiry" to inquire about the product.
Or taps the brand name to visit the brand page.

Step 4: Remove saved item
User taps the remove/unsave icon on a saved product card.
→ DELETE to /saved/:savedItemId.
Item removed from the list. Toast: "Removed from Wishlist."

16. WF-15: Brand Cancels Subscription

Goal: Allow a business user to cancel their paid subscription.

Actor: Business on any paid plan.

Happy Path

Step 1: Navigate to subscription
User opens /dashboard/subscription.
Current plan shown with renewal date.
User clicks "Manage Subscription" → "Cancel Subscription."

Step 2: Cancellation flow
Straep shows a retention screen:
"Are you sure you want to cancel?"
Reasons listed (user selects one):
- Too expensive
- Not using it enough
- Missing a feature I need
- Switching to a different platform
- Other
Optional comment field.
Two options: "Keep My Plan" and "Continue Cancellation."
User clicks "Continue Cancellation."

Step 3: Confirmation
Final confirmation: "Your Professional plan will remain active until [renewal date]. After that, your account will move to the Free plan."
User confirms.
→ POST to /subscriptions/cancel.
→ Paystack subscription cancelled (no future charges).
→ Subscription.status set to "cancel_at_period_end."
→ Subscription remains active until period end.
Email confirmation sent.

Step 4: Post-cancellation experience

User's plan remains Professional until the period end date.

After period end: plan downgrades to Free.

Free plan limitations take effect:

- Brand page reverts to basic template if current template is premium.
- Custom colours/fonts are frozen (not removed, but cannot be edited).
- Products above the Free limit are hidden (not deleted).

User receives a downgrade notification email 3 days before the period ends.

Re-subscription

If the user re-subscribes before the period ends, the cancellation is reversed and the plan continues uninterrupted. If they re-subscribe after downgrading, a new subscription is created.

17. Error and Edge Case Flows

17.1 Network Disconnection During Post Creation

- Autosave as draft every 30 seconds.
- If user submits while offline: show "You're offline. Your post will be published when you reconnect."
- On reconnect: automatic retry once; if fails, show error with manual retry button.

17.2 Brand Page Not Found (`/p/:username`)

- If brand page does not exist or is unpublished: show a 404 page with: "This brand page doesn't exist or isn't live yet." + CTA "Discover other brands."

17.3 Session Expiry During a Form

- If JWT expires while a user is filling an inquiry form: show a gentle modal: "Your session has expired. Log in to continue — your message has been saved."
- On re-login: restore the partially filled form from localStorage (inquiry form only; payment forms are not saved).

17.4 Paystack Webhook Delay

- If the webhook does not arrive within 5 minutes of the user completing payment:
 - A Celery task polls the Paystack API for the transaction status.
 - If confirmed: subscription is activated.
 - If still pending: user sees "Your payment is being verified. This usually takes a few minutes." with a refresh option.

17.5 Free Plan Limit Hit Mid-Session

- If a Free plan user reaches the product limit while the business dashboard is open (e.g., another tab added the last product):

- The next "Add Product" action shows an inline banner: "You've reached your 5-product limit. Upgrade to add more."
 - The upgrade modal opens.
-
